Urban mobility in HORIZON 2020

SUMPs-Up

- topic MG.5.4-2015 – **Strengthening the knowledge and capacities of local authorities**
- Evaluation score **13.5** / 15

**HAS
SUMPs-Up
Delivered
? ? ? ? ?**

The topic

.... Without strengthening of authorities' knowledge and capacities, a transformation of urban mobility planning will not be achieved.

- **Promoting take up of the innovative concept of Sustainable Urban Mobility Plans (SUMP).**
Proposals from **large networked groups of local authorities** should include **instruments and mechanisms for information exchange** to assist them in preparing and implementing SUMP. The **plans should build on a solid methodology** and **include quantified targets**. Proposals should ensure that **the plans comprise a long-term vision...**
- **Enhancing the capacities of local authorities** and other stakeholders **to successfully plan and implement innovative sustainable mobility measures**, technologies and tools, on the basis of reliable data and analysis

The project

Title: European Programme for Accelerating the Take up of Sustainable Urban Mobility Plans

Aim: Enable mobility planning authorities across Europe to embrace SUMP as the European-wide strategic planning approach, especially in countries where the take-up is low and the negative effects of transport are severe.

- ... will combine comprehensive SUMP research, tailored capacity-building, strong mechanisms for financial support, as well as constant SUMP monitoring and evaluation.
- ... will accelerate the development of 100 SUMPs, reach out to 600 cities and will therefore engage about 80% of the EU-cities above 50,000 inhabitants.
- ... will review, strengthen and integrate existing SUMP resources, designing a support system to assist cities to develop high quality SUMPs.
- ... A SUMP Tool Inventory will help mobility planners make better informed decisions about which planning tools to apply in their local context.

To be continued ... ;-)
